

Calcalatrons SPRINT 4 - Demo Update:

We had to change a couple analytics since there was a mismatch between the two data files from our dataset that we used (RAW_recipes.csv, interactions_test.csv).

The first result/analytic and third result/analytic utilized the number of steps column and the number of ingredients from the RAW_recipes.csv file and both of these graphs have slow performance that we need to improve on. The second result/analytic utilized the rating column from the interactions_test.csv file.
